DATE MAILED: 06/10/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/656,815	Applicant(s) TANKARD ET AL. 	
	Examiner Jimmy Nguyen	Art Unit 2829	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 31 March 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 - 22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 - 22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Argument

The argument filed 3/31/05 has found persuasived, therefore the previous office action is hereby withdrawn. However, upon further search the examiner is provided new rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 – 22 are rejected under 35 U.S.C. 102(e) as being anticipated by SoKojovic (US 6,680,608).

As to claims 1, 9, 12, Sokojovic discloses (figs 6, 7) a switched reluctance drive with a rate of change of current sensor comprising a coil (610) for coupling the flux from a conductor (605) in which rate of change of current is to be sensed, the coil (610) comprising a plurality of turns (as seen in figures 3, 4), each turn being a track on a printed circuit board (635, 640) , each turn being displaced from its neighboring turn (see figure 7) in a direction parallel to the direction of the conductor.

Art Unit: 2829

As to claim 2, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 wherein the printed circuit board (635, 640) has at least a first layer (top layer, 645, 650) and a second layer (bottom layer, 635, 640), each turn comprising a first part of the turn on the first layer and a second part of the turn on the second layer, the first and second parts of the turn being connected by a via (740) extending through the printed circuit board.

As to claim 3, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 wherein the turns (610) are rectangular, circular or hexagonal in shape.

As to claim 4, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 further comprising a feature (not shown) provided on the printed circuit board to hold the conductor (605) in place relative to the coil (610).

As to claim 5, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 a sensor according to claim 1 wherein the conductor (605) is formed on or comprises a layer of the printed circuit board.

As to claim 6, Sokojevic discloses (figs 6, 7) a sensor according to claim 2 wherein the conductor (605) is a split conductor having at least two limbs each of which runs close to vias of either side of the coil (610).

As to claim 7, Sokojevic discloses (figs 6, 7) a sensor according to claim 1, wherein at least two coils (two different portions of coil (610) are provided on the pcb, the conductor extending between the two coils.

As to claim 8, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 wherein each turns of the coil (610) is of the same dimension as the other turns.

As to claim 13, Sokojevic discloses (figs 6, 7)) a switched reluctance drive as claimed in claim 12 wherein the means for coupling comprises a coil (610)

As to claims 10, 14, Sokojevic discloses (figs 6, 7) a switched reluctance drive as claimed in claim 9 wherein the output of the sensor is fed to a circuit which detects (V_t) the point at which the rate of change of current crosses zero.

As to claims 11, 15, Sokojevic discloses (figs 6, 7) a switched reluctance drive as claimed in claim 10, wherein the output of the sensor is used to provided rotor position information.

As to claim 16, Sokojevic discloses (figs 6, 7) each turn is a single wine of coil.

Art Unit: 2829

As to claim 17, Sokojevic discloses (figs 6, 7) a sensor according to claim 16 wherein the printed circuit board has at least a first layer (a top layer) and a second layer (bottom layer), further wherein only half of each wind is on the first layer and only half of each wind is on the second layer, such that the first layer includes a plurality of half winds and the second layer includes a plurality of half-winds.

As to claims 18, 21, 22, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 wherein the conductor (605) defines an axis along which current in the conductor flows, the sensor further comprising a plurality of said vias (740) extending through the printed circuit board, said plurality of vias as viewed in cross section together a line of vias extending in a direction parallel to said axis.

As to claim 19, Sokojevic discloses (figs 6, 7) a sensor according to claim 18 wherein the plurality of vias (740) as viewed in cross section together form a pair of lines of vias, each line of vias extending in a direction parallel to said axis.

As to claim 20, Sokojevic discloses (figs 6, 7) a sensor according to claim 1 wherein each turn forms a staggered overlap with adjacent turns of the coil.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jimmy Nguyen whose telephone number is 571-272-1965. The examiner can normally be reached on M-F from 9 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ramtez Nestor, can be reached on 571-272-2034. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
